

Economics and Politics of the Environment (EPE)

The Economics and Politics of the Environment (EPE) specialization trains students to develop and implement public policies dealing with environmental problems, to manage public environmental resources, and to understand how firms and other organizations respond to these policies and management systems. EPE students acquire knowledge about interactions between the public sector and the private sector and about the impact of political processes on efforts to solve environmental problems.

Students in the EPE specialization take courses in natural resource economics and policy, cost benefit and environmental policy analysis, in addition to developing technical skills and expertise in a substantive area. A more detailed explanation of the curriculum can be found on the [EPE website](#).
