# HEALTHY CLOTHES? THAT'S US

## WE ARE KINN

over 8,000 chemicals are used in the apparel industry, many of which are known toxins. as two grad students, we are revolutionizing how clothing influences human and environmental health

### WHY THIS MATTERS

many of these toxins are known endocrine disrupting chemicals (EDCs) that impact long term hormonal health and there is minimal regulation of them in the US

### HOW KINN HELPS

KINN offers organic, non-toxic, more supportive nursing bras that reduce mother and newborn toxin exposure, and further promote human and environmental health
