

UC **SANTA BARBARA**

**Bren School of Environmental
Science & Management**

**Master's of Environmental Data Science
Capstone Project Guidelines**

INTRODUCTION

These guidelines define the Bren School's expectations for the Master of Environmental Data Science Capstone Projects and explain the process, timeline, and required deliverables.

Master's Capstone Projects are a unique and important component of the Bren School's approach to environmental data science. The School developed the Capstone process in direct response to prospective employer requests that Bren graduates possess "real world" skills. These skills include excellent academic training as well as the ability to successfully work and communicate as a member of a team and manage a professional data science project. The Capstone Project provides students an opportunity to work together to design, conduct, and present a professional environmental data science product.

Without exception, all students pursuing the Master of Environmental Data Science (MEDS) degree must successfully complete a Capstone Project.

Students who pursue Capstone Projects collaborate with clients, which may be internal clients (Bren Faculty, other UCSB researchers) or outside clients from industry, government, or non-government organizations. Clients must present a problem that can be addressed and solved by the Capstone Project. All Capstone Projects begin in Winter Quarter and end in Spring Quarter. The project requires:

- an environment in which the students can learn to operate as an independent professional team;
- a spirit of trust and collaboration by all parties;
- healthy and professional communication and rapport among all parties; and
- the ability of students to choose courses of action, make mistakes, and learn from those experiences.

CAPSTONE PROJECT TIMELINE OVERVIEW

Below are the key deadlines in this year’s Capstone Projects. Note that the instructor of EDS 411A/B, faculty advisor, or clients may request additional milestones and may set internal deadlines for drafts or other materials in addition to deadlines listed here.

Winter Quarter 2022	
Week 6 [February 11, 2022]	Draft Design and Implementation Plan due to instructor of EDS 411A and faculty advisor
Week 7 [February 18, 2022]	Feedback from the instructor of EDS 411A and faculty advisor due back to students
Week 9 [March 2, 2022]	Design and Implementation Plan Faculty Reviews
Week 10 [March 11, 2022]	<ul style="list-style-type: none"> ● Submit final Design and Implementation Plan to the instructor of EDS 411A, faculty advisor, client, and Capstone Project (CP) Coordinator; ● Send Project Repository access to CP Coordinator; ● Submit Self/Peer Evaluation to the instructor of EDS 411A and CP Coordinator

Spring Quarter 2022	
Week 2 [April 8, 2022]	Submit outline of Technical Documentation to the instructor of EDS 411B and faculty advisor
Week 5 [April 29, 2022]	Complete draft of Technical Documentation and Project Repository due to the instructor of EDS 411B and faculty advisor
Week 9 [May 26, 2022]	Capstone Project Final Presentations
Week 10 [June 3, 2022]	<ul style="list-style-type: none"> ● Revised Technical Documentation (.pdf version) and Project Repository due to the instructor of EDS 411B, faculty advisor, and CP Coordinator; ● Submit Self/Peer Evaluation to the instructor of EDS 411B and CP Coordinator

1. GENERAL INFORMATION

A. Capstone Project Timeline

MEDS students begin their Capstone Projects in the beginning of Winter Quarter and complete their projects by the end of Spring Quarter. Design and Implementation Plan Faculty Reviews are held at the end of Winter Quarter. Capstone Project Final Presentations are held at the end of Spring Quarter, with the Technical Documentation and Project Repository also due at the end of Spring Quarter. The timeline overview provides deliverable due dates. Working with their faculty advisor, groups define their own deadlines for intermediate products.

B. Academic Units and Grading

Students must register for EDS 411A and 411B in winter and spring, respectively, for a total of 8 units. The instructor for EDS 411A and EDS 411B grade(s) all EDS 411 courses and the grades will be assigned at the end of their respective quarters.

Students must achieve a grade of B or better on their Capstone Project to be eligible for the MEDS degree. Students working together on a project may not necessarily receive the same grade.

Additionally, students cannot be recommended for graduation until they have submitted an approved final deliverable package.

By the last day of each quarter, students are required to complete and submit a Capstone Project Peer and Self Evaluation Form to the instructor of EDS 411 and the Capstone Project Coordinator. These evaluations will be considered by the instructor when grades are being assigned. This form can be found on the Bren School website: <https://bren.ucsb.edu/academic-resources-current-students>

C. Student Time Commitment

Students should expect to devote **at least 10-12 hours per week** to their Capstone Project during Winter and Spring Quarters, although more time can be expected for some tasks. Work on Capstone Projects should be evenly allocated over the 2 quarters to avoid excess workload at the end of the project.

D. Deliverables

The major deliverables for the Capstone Project are:

- Design and Implementation Plan
- Design and Implementation Plan Faculty Review presentation
- Technical Documentation
- Capstone Project Final Presentation
- Project Repository, which includes as appropriate:
 - Completed analysis or model, including data description
 - Documentation and workflows
 - Interface and/or data visualization

E. Authorship/Ownership

Each member of the group is an equal owner of the intellectual property of the project. Frequently, groups divide the responsibility for some tasks that further the project; one or several individuals may invest more time in one aspect of the project than others. However, each member of the group ultimately contributes to the body of work that emerges from a Capstone Project. Therefore, **every required paper, presentation, etc., that is produced by the group MUST list every member as an author.**

Groups are encouraged, but not required, to present their Capstone Project findings in formal conferences outside the university. Participation in such conferences gives students valuable experience and increases the visibility of the Bren School and its students. Groups also may want to publish results in a peer-reviewed journal. Groups may collectively develop criteria for authorship of these supplemental materials (e.g., 2-unit independent study with advisor) but all members of the group must agree to these criteria. A group member may choose not to be included as a co-author on a publication. However, ALL group members must be offered the opportunity to make their own decision about their authorship. Even after the project has ended, if a group member adapts the deliverables for presentation at a meeting or submission to a journal, EVERY group member should be listed as a co-author. Groups also may include their faculty advisor or others who contributed substantially to the research as co-authors.

F. Data Distribution

Datasets obtained or derived during your work may be licensed, copyrighted or confidential. Students should NOT make them available to third parties, or generally available online, without authorization from their faculty advisor AND the original source of data, such as an external client. If a group is working with confidential data, a Non-Disclosure Agreement (NDA) will likely be necessary between the client and UCSB. NDAs are developed, approved, and signed by UCSB's Office of Technology and Industry Alliances. Under NO circumstances can a student sign an NDA with a client.

G. Publishing

If a group would like to publish its work, group members must discuss this with their advisor. Faculty advisors are experts in peer-reviewed publication, and students should take advantage of their knowledge and experience. Publishing peer-reviewed literature requires interfacing with a larger scholarly community, and this should be done in a way that reflects well on the students, their advisor, the client, and the Bren School. Note that it often takes a prolonged period (months to years) to get a paper published.

H. Use of Human Subjects

Faculty and students who engage in research involving human subjects must obtain prior approval from the UCSB Human Subjects Committee (HSC). "Human Subject" means a living individual about whom an investigator (whether professional or student) conducting research obtains (i) data through intervention or interaction with the individual or (ii) identifiable private information. This means that **if a survey will be conducted, HSC approval MUST be obtained in advance.** Approval is required no matter with whom the group will interact - even friends or family!

If a group will use human subjects, it must review the Office of Research site: <https://www.research.ucsb.edu/human-subjects/about>. The group must understand and abide by the policies and procedures. The process for obtaining HSC approval for proposed research is not immediate and cannot be addressed at the last minute. There are serious consequences if a group is not in compliance. **Human subjects cannot be interviewed, surveyed, or contacted in any way without prior approval from HSC.**

2. COMPOSITION OF THE CAPSTONE PROJECTS

A. Group Members

Each group is composed of 3 to 4 students. Students vote on projects by assigning preference points in the Fall Quarter. Group assignments are determined at the end of Fall Quarter by a computer algorithm that uses these points to optimize overall student preferences for different projects. Not all students will be assigned to their preferred project. However, almost all students are assigned to their first or second choice project. The experience of completing a Capstone Project is generally comparable across groups regardless of the topic of the project.

B. Faculty Advisors

Each Capstone Project is assigned two faculty advisors; each group must have at least one advisor who is Bren School ladder faculty (or 0% affiliates) **in addition** to the instructor of EDS 411A/B on their master's thesis committee. The primary faculty advisor is the instructor of EDS 411A/B. The primary advisor monitors progress and provides technical assistance, expertise, project evaluations, and grades. The secondary faculty advisor acts as a subject matter consultant and provides environmental domain expertise, project feedback, and deliverable quality evaluations. The students are responsible for project leadership, management, and the quality of the final products.

Faculty advisors do not serve as project managers; their role is similar to that of a consultant. The primary advisor meets with groups regularly in EDS 411A/B and is responsible for grading. Primary or secondary advisors may offer reactive advice, responding to activities in the group and providing guidance when asked. The advisors also may give proactive advice regarding deficiencies and deadlines. It is important that students understand the role of the advisors and the limited, though important, role they play in directing the project. Each faculty advisor has his/her own unique approach. Students should expect variability in engagement, expectations, and feedback from one advisor to the next. During the first Quarter of the project, each group should clarify the expected level of interaction with their advisors. Groups should include this information in their Design and Implementation Plan.

C. Clients

Clients supply the environmental data science objectives and relevant data that are central to Capstone Projects. Clients may submit Capstone Project proposals on their own. If the client is external to Bren, we advise them to work with the Capstone Project Coordinator and/or Bren faculty to develop and submit proposals. If incoming students have a relevant environmental data science project they are interested in proposing, they may reach out to the CP Coordinator prior to the start of Fall Quarter.

Effective clients will be engaged in the project, knowledgeable about its topics, and serve as a resource for students, while not constraining the group's approach or the project's outcome. Some clients may have a clear idea of the objective and what types of solutions are needed. Other clients may be more flexible about the types of solutions needed and they may prefer that students provide direction for how to meet the objective. Students should maintain frequent, professional communication with clients throughout the project. In particular, students must engage the client early in Winter Quarter, so that all parties clearly understand the project objectives, deliverables and timeline. If an in-person meeting consisting of the group, faculty advisor, client, and external advisors is not possible, then students should engage the client through teleconference or Zoom. The students should invite the clients to attend the project's Capstone Project Final Presentation.

D. External Advisors

Interacting and networking with the professional community may be valuable to the Capstone Project process. We encourage students to seek expertise from other professionals to assist them as informal external advisors, such as individuals from government agencies, industry, non-governmental organizations, universities, or private citizens who may be interested in the project, its data or deliverables. An external advisor is someone who has knowledge about the project topic and can provide unbiased feedback.

If an external advisor is desired, groups will be responsible for identifying external advisors and maintaining professional contact with them for the duration of the project. The external advisors may be invited to meet, together with the faculty advisor(s), clients, and group members. External advisors may also be invited by the students to attend the Capstone Project Final Presentation.

E. Capstone Project Coordinator

The Capstone Project Coordinator is a Bren staff member who assists students, faculty advisors, and the Capstone Project Committee in facilitating the Capstone Project process. The Capstone Project Coordinator is Emily Case (ecase@bren.ucsb.edu). Any questions or concerns regarding a Capstone Project should be addressed to the Capstone Project Coordinator.

3. PROJECT MANAGEMENT

A. Group Meetings

In addition to attending EDS 411A/B, groups are encouraged to meet as often as necessary. **Regular group meetings should not be scheduled on Monday or Thursday between 11:00 am – 12:15 pm, or Thursdays from 8:15 - 9:15 am** as these days and times are reserved for seminars, career talks, and faculty meetings. The primary faculty advisor will lead weekly classroom sessions in EDS 411A/B. However, it is the responsibility of the students, not the advisor(s), to schedule the meetings and make necessary arrangements. Advance notification of absences to the group is expected as a matter of courtesy. Participation in the group meetings is a portion of each student's grade; missed meetings may negatively affect the overall grade.

B. Scheduling Meeting Rooms

Students are responsible for scheduling their own rooms for regular Capstone Project meetings. Each group should designate a scheduler for the group and this person should be responsible for all calendar entries for their group. **It is imperative that the scheduler check availability before scheduling and never schedule over an existing reservation.** In addition, if plans change and the room is not needed as scheduled, the reservation should be removed immediately since meeting rooms are in high demand. Meeting rooms are available at the National Center for Ecological Analysis and Synthesis (NCEAS), Bren Hall, and the UCSB library.

Bren Hall

For recurring weekly meetings, please email scheduling@bren.ucsb.edu with your preferred days, time and location. Requests should be made at least 48 hours in advance. The Visitors Center (BH 1410), Bonsai (BH 4327), Maple (BH 3016) and Manzanita (BH 4329) rooms should be the only rooms used to book capstone project meetings.

You can self-book a room using [RobinPowered](#). Please note that you are limited to booking up to 14 days ahead, no recurring meetings, and a max meeting length of two hours.

The scheduler MUST include the **group's and scheduler's names** in the title of the meeting so that the Bren scheduling team can easily contact the group in the event of a conflict. **Students may not make reservations on any room calendar other than these 3 designated rooms.** If none of the designated student rooms are available, Capstone Project meetings may be scheduled by Bren staff on behalf of the group in other rooms. Students may request a room by sending an email to scheduling@bren.ucsb.edu.

NCEAS

NCEAS has a private meeting room on the first floor for student use. The Sequoia Room (Room 105) can be reserved for meetings through booking.bren.ucsb.edu. Recurring meetings **can be scheduled for the Sequoia room.**

UCSB Library

The library on campus has the following room types available for reservation by students:

- 24 Hour Group Study Rooms
- Group Study Rooms
- Presentation Practice Room

Instructions for scheduling rooms in the UCSB library are available online at:

<http://libcal.library.ucsb.edu/>

C. Conflict Resolution

The primary responsibility for intra-group conflict resolution lies with the group members. The instructor of EDS 411A/B or the faculty advisor should help to resolve any issues that cannot be adequately addressed by the group members. If a group is still unable to resolve a conflict after faculty arbitration, the group may seek assistance from the Capstone Project Coordinator or the Chair of the Capstone

Project Committee, who will consult with the committee, if needed. Students may also wish to contact the campus Ombuds office (<http://www.ombuds.ucsb.edu>). Trained mediators are available at no cost throughout the year. Their mediation techniques are informal, confidential, and impartial.

If students have difficulty with a member of their group, it is critical that they maintain written documentation of the problem and attempted solutions. For example, if one member of a group is not doing his/her share of work or not providing timely products or products of adequate quality, the other group members must document dates of specific incidents and what efforts were made to address the problem. Only under these circumstances will it be possible for faculty advisors and administrative personnel to intervene and help craft a solution. Administrative involvement is generally limited and occurs only when there are serious issues that remain unresolved after considerable effort by the students and faculty advisor(s). Because of federal privacy laws, students may not be informed of specific interventions or disciplinary actions taken with other students; however, this does not mean the problem was not acted upon by administration.

4. PROJECT DELIVERABLES

Refer to the timeline overview for a summary of Capstone Project deadlines and deliverables. Students must pass all EDS 411 courses with a B or better in order to be eligible for the MEDS degree. Students must be actively involved with their group throughout the six-month project to receive a passing grade.

A. EDS 411A (Winter Quarter)

MEDS students begin Capstone Projects in Winter Quarter and are required to register for EDS 411A Capstone Project (4 units). EDS 411A will have a regular class schedule and instructor. Additionally, students are required to attend relevant workshops, and schedule weekly meetings with all group members.

EDS 411A requires completion of the following elements:

1. Scoping of the Project

As part of EDS 411A, each group transforms the project's initial proposal into a tractable Design and Implementation Plan. Students should immediately begin investigating the objective presented in the proposal. In addition to in-class participation in EDS 411A, **students must schedule regular weekly meetings with their group and secondary faculty advisor.** Students should strive to meet with their faculty advisor in person, if possible, or by teleconference or email if the faculty advisor is off-campus. The first in-person meeting should be scheduled during the first week of Winter Quarter and should include both the faculty advisor and EDS 411A instructor. In the first 2 weeks of EDS 411A, students should determine what is feasible to complete within six months, the roles and responsibilities of each group member, and understand the level of academic performance needed to satisfy the requirements of the MEDS program. The group and faculty advisor should read the initial proposal critically prior to the meeting and be prepared to discuss expectations for each other. Students should also prepare for a scoping meeting with the secondary faculty advisor and client during Week 2.

Subsequent weekly course sessions are intended to provide guidance and feedback as the project develops. The Winter Quarter focuses on design of the data science solution. Attention to best practices for data science should be paid early in the Winter Quarter to ensure that proposed design addresses the following:

- Data science solutions that contain
 - Robust, reproducible workflows
 - Reliable, sustainable products that are easy to use and maintain
 - Quality assurance and error-checking
- Interface development e.g., data visualization
- Testing approach
- Documentation
- Data, model, workflows, and documentation that are archival/retrievable.
- Project management strategy for design and implementation

A critical element of a successful Capstone Project is clear, frequent and open communication with the client. Clients may be involved with their Capstone Projects to a greater or lesser degree, depending on their availability, expertise and desired level of engagement. Central to deciding what the project will include (and what it will not include) is a scoping meeting in Week 2 with the group members, client and faculty advisor(s). As noted above, **students should schedule a meeting with the client (in person if the client is local or by Zoom or teleconference if the client is not local), even if the secondary faculty advisor is the client, during the second week of Winter Quarter.** The purpose of the meeting with the client and faculty member is to develop a shared understanding of the project objectives. If any objectives in the original proposal are not feasible, the faculty advisor and students will discuss this with the client and develop an understanding of how the group plans to proceed. The meeting(s) with the faculty advisor and client should result in a clear agreement about what is possible and not possible given the available time, resources, data, client support, and faculty and student capabilities. Following the meetings, students should document the project objectives and produce a short list of deliverables.

Students may schedule additional meetings with the faculty advisor and client, as needed and appropriate.

2. Design and Implementation Plan

The Design and Implementation Plan is a concrete and realistic statement of what the group will do to solve the assigned problem for the client. The construction and articulation of this plan are significant parts of the work required to solve the problem. The Design and Implementation plan should be limited to **10 single-spaced pages of written text**. This page limit does not include the title page, executive summary, graphics and figures, budget and justification, or references cited. All graphics and figures should be included as appendices and referred to in-text. A draft of the implementation plan is submitted to the instructor of EDS 411A and the group's secondary faculty advisor in Week 6 of Winter Quarter (see timeline for date). The final Design and Implementation Plan is due to the instructor of EDS 411A, faculty advisor, client, and Capstone Coordinator on the last day of Winter Quarter.

The Design and Implementation Plan must include the following components:

- a. Title Page (Appendix III)
- b. Executive Summary (not to exceed one page)
- c. Problem Statement and Objectives
- d. Solution Design
 - i. Approach and Methods
 - ii. Data Management Plan
 - iii. Proposed Software or Tools
- e. Products and Deliverables
- f. Documentation Plan
- g. Testing Plan
- h. Timeline and Milestones
- i. Team Management Plan
- j. Budget and Budget Justification
- k. References

Description of implementation plan components:

(a) Title page (See formatting guidelines in Appendix III)

The title page must include the following information:

- Title (no more than 10 words recommended)
- Names of group participants (alphabetical order recommended)
- Names of faculty advisors
- Bren School of Environmental Science & Management, University of California, Santa Barbara
- Date (month and year of completion i.e., March 2022)

(b) Executive summary

The executive summary of the Design and Implementation Plan should be no longer than one page. The executive summary should include background information, objectives, proposed approach, and anticipated results. The executive summary should be text only; do not include graphs or photos.

(c) Problem Statement and Objectives

Write a brief description of the environmental data science problem to be addressed. Include a short list of objectives based on the project proposal and the feedback received during meetings between the faculty advisor, client and student group. Typically, students will address only one objective for a Capstone Project. (If a group has more than three objectives, they are probably too specific; it may be appropriate to move this detailed information to the approach and methods of the solution design). Keep overarching objectives in mind throughout the project and use them continually to monitor whether the group is on track or whether the group needs to re-orient its activities.

(d) Solution Design

I. *Approach and Methods*

Include an overall strategy and the specific tasks necessary to accomplish the objectives. Describe in detail the data analyses approach and/or software necessary to address the objectives. Use schematics, conceptual models or workflow diagrams where possible. Include information on software tools to be used. If possible, include preliminary analyses or a prototype. Make a plan for how to handle the data. While writing this section, ask penetrating questions, such as: How will the data be prepared for analyses? Describe the nature of the results and how results will be communicated to users. Provide a detailed plan for visualization of results and a plan for ensuring reliability of the data analysis. How will testing be incorporated? How is sustainability and maintenance being considered in the design, tool selection, and development of the product? What will documentation of workflows look like? In conclusion, summarize how software or data analysis will be used to meet the overall project objectives.

II. *Data Management Plan*

Data and metadata emerging from the project will be archived for public use according to a license agreed upon by the client and group. The only exception is for data restricted by a Non-Disclosure Agreement. For both public and restricted data, the group's design and implementation plan must include a Data Management Plan (DMP). The DMP describes how research data will be managed during the project and, if appropriate, made available to others after completion. There are six major topics to discuss in the DMP:

1. *Describing the research data.* What data are needed? How will the data be transferred from the client? Provide a description of the data the group will use, including the file types, data set size, number of expected files or sets, content, and source of the data (creator and method of collection).
2. *Data standards.* Are there any standard formats in the specific research field for managing or disseminating the data sets that have been identified (e.g., XML, ASCII, CSV, .shp, .gdb, GeoTIFF)?
3. *Metadata.* Metadata is documentation that helps make data sets re-usable. Think about what details (metadata) someone would need in order to be able to understand and use these files. For example, perhaps a readme.txt file is necessary to explain variables, structure of the files, etc.
4. *Data sharing and access.* The data may have significant value for other researchers beyond this project, and sharing this data is part of the group's responsibility as members of the scientific community. Specify the extent to which data can be reused, including any licensing and access limitations. List any proprietary software that might

be needed to read the files. If there is data that is not appropriate for sharing due to confidentiality, NDA, or disclosure risk, describe that here.

5. *Intellectual property and re-use.* If data were collected from the client organization, does the group have the right to redistribute it? If so, are there any restrictions on redistribution? If the group created its data files, will it assign a Creative Commons license to its data?
6. *Data archiving and preservation.* Throughout the project, the group may produce a large number of files. At the end of the project, groups must submit data used in the project (except data protected by non-disclosure agreements) and associated metadata. Not all data need to be saved, such as interim results derived from an original data set. If another researcher wanted to replicate the group's work or re-use the group's data, what data and documentation would be required for them to do so? Where will the data and metadata be stored after the project is completed? Is there a subject-specific and/or open-access repository that is appropriate for the data? If students need assistance in evaluating repositories, they should contact datacuration@library.ucsb.edu.

III. Software or Tools

Describe any open source or proprietary software expected to be used in the project. This may include modelling, spatial analysis, relational database, repository, or any other software that will be leveraged to meet the Capstone Project objectives. Describe how this software will be accessed and how it will be used to meet the objectives of the Capstone Project.

(e) Products and Deliverables

There are two types of Capstone Project deliverables: (1) products for the client and (2) academic deliverables required to complete EDS 411A/B and to fulfill the requirements of the MEDS degree. In this section, list the products that will be created for the client. Also list the academic deliverables including Design and Implementation Plan, data and metadata, Design and Implementation Plan Faculty Review presentation, technical documentation, project repository, and Capstone Project Final Presentation.

The group should use the list of products and deliverables to gauge its progress. Some of the deliverables can be produced in the early stages of the project. The group should continually keep the list of products and deliverables in mind when working on the project. Be sure to include detailed descriptions of the expected interface, demonstration, or data visualization.

(f) Documentation Plan

A detailed documentation plan should be included. Documentation approach should include a description of the format of the documentation (e.g Rmarkdown, GitHub Wiki, User manual) and an outline of key topics to be included in the documentation.

(g) Testing Plan

A plan for testing should be included. Strategies for testing should include functionality to be tested, data to be used for testing, specific tests to be completed. Depending on the project, testing may also involve the client and/or other human testers (i.e. to test usability of an interactive tool).

(g) Timeline and Milestones

Milestones will help students complete their Capstone Project by identifying key tasks and products that they will create as the project proceeds. In this section, students should make a timeline of the dates by which they intend to complete each of the tasks outlined in the Approach and Methods section, including data acquisition, analyses, evaluation of results, product development, and testing and documentation. Include the dates by which the group intends to complete drafts and final versions of each of its products and deliverables. At the end of Winter Quarter, students should review and possibly re-organize the remaining milestones.

(h) Team Management Plan

The Management Plan outlines a group's management structure and general plan for the form and function of the group. It should specifically include:

- I. *Code of Conduct.* All group members should work together to develop an agreed upon Code of Conduct. Please see Allison's course COC as an example (https://allisonhorst.github.io/EDS_212_essential-math/code_of_conduct.html).
- II. *Roles and responsibilities.* This section should include a description of the roles and responsibilities assigned to each of the group members. It also should include the names of the faculty advisors, client and any informal external advisors with short descriptions of their roles. Each group is required to assign the roles of project manager (PM) and communication manager (CM).
- III. *Meeting structure.* The students should describe who will schedule the meetings and meeting rooms, notify participants, and take and distribute meeting minutes. It is the group's responsibility to schedule meetings with the faculty advisor, client and any external advisors and notify them with sufficient time so they can join the meetings and review background materials.
- IV. *Guidelines for interacting with faculty advisors, clients, and any informal external advisors.* Describe who will be the primary point of contact for the faculty advisor, client and any external advisors. Describe how the group will keep its client informed of progress. It is critical that groups always use the highest professional standards in their interactions with faculty advisors, client, and any external advisors.
- V. *Systems to ensure that critical tasks are completed on time.* Describe the group's approach to tracking progress and completing milestones on time. How will the group do this? Who will make

sure that projects are getting done on time? What is the protocol for addressing late or no submission of interim and final products?

- VI. *Procedures for documenting, cataloging, and archiving information.* Documents, contact information, messages, calendars, repositories, budget projections, and expenditures must be accessible to all Capstone Project members. Students should describe their approach to organizing information gathered and generated by the group. If there are delays or failures, the entire project can be adversely affected.
- VII. *Overall expectations of group members and faculty advisors.* Students should discuss with their faculty advisors their own and their advisors' expectations. Document the expectations of the faculty advisor and students regarding faculty involvement and grading criteria.
- VIII. *Conflict resolution process.* Some of the tasks undertaken by the group may turn out to be unexpectedly difficult or even impossible. It is important that a group member who encounters such a difficulty communicates the problem to other members promptly and explicitly. The group might then share ideas or seek guidance from the faculty advisor, or re-focus the project if the task is beyond the capacities of the group. Prompt and continuous communication will help the group overcome such difficulties and avoid late surprises or disappointment. Other difficulties can arise because of uneven contributions among the members. This dynamic can lead to feelings of exclusion or that one or more members are not pulling their weight. Describe steps that the group will take if a member does not sufficiently contribute. It is better to decide on ways of dealing with such problems before they arise.

The starting point for managing conflict is for the group to assume initial responsibility for the problem. The group's management plan should first focus on assisting or motivating a group member experiencing difficulty, realizing that problems might arise for anyone. Methods for dealing with problems include peer review and/or division or re-negotiation of responsibilities. If a resolution cannot be reached using these tools within a reasonable time (no longer than a month), the group should engage the instructor of EDS 411, secondary faculty advisor, or the Capstone Project Coordinator. If a group member consistently fails to contribute at the expected level, the group should meet individually with the instructor of EDS 411, faculty advisor, and/or the Capstone Project Coordinator to discuss the problem and possible solutions. If a serious problem emerges, group members should feel free to schedule individual meetings, as needed with the instructor of EDS 411, their faculty advisor, and/or the Capstone Project Coordinator. If it is not possible to resolve the problem with this intervention, then it may be necessary to schedule a facilitated group meeting with the Assistant Dean or campus ombuds

(i) Budget and Budget Justification

See Appendix V for a Sample Capstone Project budget. If the expenses are not standard operating costs, please provide a short justification for why the expenses are critical for the project. If you are unsure of whether expenses are authorized, please consult Bren purchasing procedures and/or contact the

Finance team. The group's financial manager must meet with the Business Officer prior to hiring any prospective consultants for Capstone Projects.

(j) References

Include a bibliography of references used to support the group's research. Information derived from other authors must be cited properly. The reference citations should be presented in a standard and consistent format, and managed using citation software (e.g. Zotero).

The final Design and Implementation Plan is due to the instructor of EDS 411A, faculty advisor, and client by the last day of Winter Quarter.

4. Design and Implementation Plan Faculty Review Presentation

In Week 9 of Winter Quarter (see timeline for dates), each group presents its project Design and Implementation Plan for faculty review. These presentations will take place during the normally scheduled class time of EDS 411A. By this point, groups should have revised their draft of their Design and Implementation Plan based on feedback from the instructor of EDS 411A and faculty advisor. The Faculty Review is an opportunity for the students to present their approach to solving their client's problem and expected products and documentation. The Faculty Review is a checkpoint in the Capstone Project process so that students receive verbal feedback from their faculty advisors with a primary emphasis on methodology, technical approaches, and proposed products and documentation, such as data visualization or demonstration. At the time of the review, the project is still underway, and students should integrate feedback from faculty reviewers to the extent possible.

For the Faculty Review, groups will prepare a 12 minute presentation. The focus should be on the project's significance, data, methods, and proposed products and documentation. Groups must include a mock up of an expected interface or data visualization component. Students also may include any outstanding questions for which they are seeking guidance. Following the presentation, the instructor of 411A and the group's secondary advisor will engage students in 8 minutes of questions and discussion. It is recommended that no more than two group members present, since speaker transitions are disruptive and generally reduce the effectiveness of the presentation, especially when there is limited time. All members of the group must be in attendance and will be part of a panel seated in front of the audience. The entire group will participate in answering questions, as appropriate.

Groups should expect questions and criticism from their reviewers that may result in additional revisions to their Design and Implementation Plan. It is the group's responsibility during the faculty review to explain their work to their faculty advisors and classmates. The faculty reviewers provide oral feedback to the group summarizing the strengths of the project and/or recommendations for improvement. The instructor of EDS 411A, along with the Capstone Coordinator, make all arrangements, including setting the presentation schedule and facilitating presentations and Q&A. Groups should invite their secondary faculty advisor, client and any external advisors to attend this presentation.

5. Evaluations

Each student in the group must complete a self and peer evaluation and submit it to the instructor of EDS 411A and the Capstone Project Coordinator by the last day of each quarter. The evaluation requires realistic reflection on the progress and functioning of the group. The primary goal of the evaluations is to inform the instructor of EDS 411A and Capstone Project Coordinator of group dynamics and any problems that may require future intervention. With appropriate justification, self and peer evaluations may impact grade assignments by the EDS 411A instructor. Evaluations are confidential from other group members. This form can be found online at: <https://bren.ucsb.edu/academic-resources-current-students>

6. Timeline, milestones, and assignments from EDS 411A

The table below summarizes the milestones to be completed as part of EDS 411A. All milestones for EDS 411A are required for all students pursuing Capstone Projects. In addition to the activities below, there are tasks that students must complete which are detailed in the 411A Course Syllabus.

Week	Milestone
6	Draft of Design & Implementation plan due
9	Faculty reviews
10	Finalize design & Implementation plan

B. EDS 411 B (Spring Quarter)

Students must enroll in EDS 411B Capstone Project for 4 units with the instructor in the Spring Quarter.

EDS 411B will have a regular class schedule and instructor. Additionally, students are required to attend relevant workshops, and schedule weekly meetings with all group members. In Spring Quarter, students focus on implementation of the Design and Implementation Plan and execution of product development and delivery, including Technical Documentation. By the end of the year, groups will deliver final client products and final academic deliverables, such as technical documentation and the project repository.

1. Outline for Technical Documentation

By the Week 2 of Spring Quarter, each group submits an outline for the Technical Documentation to the EDS 411B instructor. The outline should include:

- a. Problem statement
- b. Revised project objectives
- c. Summary of solution design
- d. Products and deliverables
- e. Summary of testing
- f. User documentation
- g. Archive access
- h. References

For each section of the outline, include as much information as completed to date and note the extent to which the section is completed, and/or any remaining obstacles to its completion. As an appendix to the outline, describe the work to be completed during the remainder of Spring Quarter and a timeline for remaining tasks and deliverables.

2. Capstone Project Final Presentation

Capstone Project Final Presentations celebrate the completion of product development, and offer MEDS students the opportunity to share their work with faculty, peers, potential employers, members of the community, family and friends. The Final Presentation is an opportunity for the students to present their client products and their significance. Final Presentations contribute to the reputation and prestige of the Bren School and, hence, the value of the students' degrees. Participants are advised to dress in business attire.

In Week 9 of the Spring Quarter (see timeline for dates), each group presents its final project. By this point, the project should be nearing completion. Groups will prepare a 15-20 minute presentation with a product-oriented focus; groups must include a demonstration of their product interface or data visualization. Following the presentation, students will engage in 10-15 minutes of questions and discussion with the audience. It is recommended that no more than two group members present, since speaker transitions are disruptive and generally reduce the effectiveness of the presentation, especially when there is limited time. However, three group members can present if the group works on seamless transitions between the speakers to reduce disruption. All members of the group must be in attendance and will be part of a panel seated in front of the audience. The entire group will participate in answering questions, as appropriate; groups should discuss in advance who will present at these events.

The audience at the Final Presentations is different than the audience at the Design and Implementation Plan Faculty Reviews. The Final Presentations need to be understandable to a diverse group (employers, experts, non-experts, family, and friends, etc.). Students should prepare a presentation for an audience that is more interested in substance and environmental data science products and less interested in, for example, analytical methods or data management. Each project has one page in the Capstone Project Final Presentations program. An abstract, along with the project title, group members, advisor(s), and acknowledgements must be sent electronically to the Capstone Project Coordinator at the end of Winter Quarter.

The entire Bren School community is invited to attend the Capstone Project Final Presentations. The Capstone Project Coordinator makes all arrangements, including setting the presentation schedule and facilitating presentations and Q&A. Groups should invite their client and any external advisors to attend this presentation.

3. Technical Documentation

The Technical Documentation is an academic deliverable that provides a functional discussion of the project's objectives, solution design, products, testing, and user documentation. A complete draft of the Technical Documentation must be submitted by the end of Week 5. The revised documentation is due at

the end of Spring Quarter (see timeline for dates). The deadline for the final Technical Documentation is firm.

The Technical Documentation should reflect the group's ability to articulate in writing the 1) problem and objectives, 2) summarized solution design, 3) description of products, 4) testing approach and results, and 5) user manual or instructions. The documentation must demonstrate that the group has the ability to develop data science solutions that are robust, reproducible, reliable, and quality-assured. In the event that project data is restricted by an NDA, the group should include sufficient information in the user manual section so that potential users are aware of the data and could contact the issuer of the NDA for access.

The goal of the Technical Documentation is not to simply repeat information from the Design and Implementation Plan, but rather to communicate critical information so that a user may understand the product development and reproduce results.

The Technical Documentation should include the following:

- Title Page
- Signature Page
- Abstract (not to exceed 200 words)
- Executive Summary (not to exceed 4 pages)
- Table of Contents
- Problem Statement
- Specific Objectives
- Summary of Solution Design
- Products and Deliverables
- Summary of Testing
- User Documentation
- Archive Access
- References

A complete draft of the technical documentation report is due to the instructor of EDS 411B and faculty advisor at the end of Week 5 of Spring Quarter. The revised final documentation is due at the end of Spring Quarter.

The Technical Documentation should acknowledge any individuals or organizations that have supported the project in any significant way, professionally or financially. Students must obtain permission to include such acknowledgement; supporters have the right not to be publicly associated with the final documentation and project repository.

Adherence to accepted rules of citation is required. Groups should choose a method of citation and use it consistently, i.e. MLA, APA, Chicago, etc. Citations must provide sufficient information for a reader to access the cited work, assuming appropriate permissions (e.g., a journal subscription).

Groups should expect multiple revisions and iterations with the instructor of EDS 411B and faculty advisor before their Technical Documentation is finalized. It is strongly recommended that one group member serve as the editor to review all sections of the documentation to make sure the report is presented in a single and professional voice. It is NOT acceptable to submit a draft documentation that cobbles together several sections created by different group members without at least one group member (the editor) having reviewed all sections to make sure that the style and level of detail are consistent throughout the report.

Students and advisors must discuss and agree upon a realistic timeline and consistent expectations for the review process. Some advisors will expect drafts earlier and may require longer periods for review and comment than others. In general, students should expect that their advisor will require at least one week, but maybe two weeks, to thoroughly review the documentation. More than one iteration likely will be necessary before the advisors find the Technical Documentation to be acceptable. The project timeline must take into account the required iterations for review and revision of the documentation and project repository. The instructor of EDS 411B and the group's faculty advisors likely will be the only people who read and provide feedback on the complete draft Technical Documentation. Some clients and external advisors also may have the interest, time and expertise to review and provide feedback on some or all of the draft documentation and/or project repository.

Technical Documentations must not exceed 50 pages, and must be free of typographical, formatting, and other errors. All documentations must be formatted in compliance with "Bren School Filing Guidelines" (see Appendix II).

Once approved, each group must provide an electronic copy of the Technical Documentation, including the completed signature page, to the Capstone Project Coordinator, instructor of EDS 411B, faculty advisors, and client. The Technical Documentation will be posted to the Bren School website unless an NDA restricts public sharing. The faculty advisor(s) or client may also request hard copies of the documentation.

4. Project Repository

Each group is required to submit a project repository of their work. This repository must be accessible by the EDS 411B instructor, secondary faculty advisor, and the client. This may include multiple source code files, data, as well as other resources used by the project. The User Documentation section from the Technical Documentation should be included, at minimum.

A working draft of the Project Repository must be submitted by the end of Week 5; it is not expected that students submit a complete repository at this point. The completed repository is due at the end of Spring Quarter (see timeline for dates). The deadline for the final Project Repository is firm.

See Appendix II for filing and formatting requirements of the Capstone Project Repository.

5. EVALUATIONS

A. Faculty Evaluation of Students

Each student in the group will receive a separate grade for each quarter of the project (EDS 411A/B). If a group performs well together, it is likely that all group members will receive the same grade, but this is not guaranteed.

Student performance in a Capstone Project is evaluated and graded based on demonstrated ability to develop data science solutions that are robust, reproducible, reliable, and quality-assured. Specific criteria that faculty advisors will use in assigning project grades include:

1. Team-oriented data science design and implementation design.
2. Project management. Students shall attend all group meetings on time and ready to engage with their team. They must manage and deliver intermediate and final products on schedule, both to meet Bren School deadlines as well as intra-group deadlines.
3. Data processing/analysis/manipulation. Students shall demonstrate their knowledge of coursework and data science techniques.
4. Data science solutions that contain:
 - a. Robust, reproducible workflows
 - b. Reliable and easy to use products
 - c. Quality assurance and error-checking
5. Interface development e.g., data visualization.
6. Documentation. Project documentation and demonstrations shall be well-organized, scholarly, and well-communicated.
7. Archival/retrievable. All data, model, workflows, documentation, etc. must be easily accessible and retrievable.
8. Participation. Students shall participate and actively contribute in meetings, training sessions, and events.
9. Resourcefulness. Throughout the project, students shall demonstrate initiative in finding information and identifying tools necessary to achieve the scope of their project.
10. Professional relationships. Group members shall demonstrate the highest level of professionalism and respect in their dealings with each other, their faculty advisor, client, and other stakeholders.
11. The student peer & self-evaluation form will be taken into consideration when assigning grades.

2. Student Evaluations of Faculty Advisors

At the end of the project, all Capstone Project members should complete an evaluation for their secondary faculty advisor and submit it to the Capstone Project Coordinator (see Appendix I). Students should also complete an evaluation for the instructor of EDS 411B. The Capstone Project Coordinator compiles all comments for anonymity and provides them to faculty only after the final grade for EDS 411B is issued.

In the event that there are any serious advising problems mid-way through the project, this should be brought to the attention of the Capstone Project Coordinator or the Assistant Dean for Academic Programs. These staff understand and are committed to respecting privacy and anonymity in working with students to try to find solutions to problems.

6. Project Budget

Each MEDS Capstone Project is allotted \$250 for project expenses and printing on Bren School printers. Each group should create a budget for its project, estimating expenses to the best of its ability and accounting for costs such as phone calls, travel, software, datasets, business cards, reference books, presentation materials, photocopying, and publication expenses when preparing the budget. The budget is for reasonable expenses related to the Capstone Project. If a group does not anticipate any project expenses, a budget does not need to be created.

Bren School Purchasing Procedures: <https://bren.ucsb.edu/purchasing>

Please note: There are numerous restrictions to use of Capstone Project funds provided by the Bren School. **These funds cannot be used (*see *exception below*) to pay for gifts, awards, or donations. There are strict eligibility requirements related to hiring. The group must discuss all potential hires with the Bren School's Business Officer before proceeding with the hire. Restrictions related to use of funds for food and beverages are as follows:**

- Funds may only be used for food and beverages associated with entertainment/business meetings if (1) prior approval is obtained from the Bren School's Business Officer; and (2) the entertainment is associated with a meeting that includes other people who are not from the University (i.e. client, external advisor). **The funds cannot be used to provide food and beverages for meetings that include only UC personnel and/or students.** There are NO exceptions to this UC policy.
- Funds may only be used for food and beverages related to travel if the travel conforms to UC travel policies (<https://bren.ucsb.edu/travel>).

**Under special circumstances, the group can request an exception to policy for expenditure for a gift. However, requests for exception to the policy must be made to the Bren School's Business Officer in advance of the expenditure and approval is not guaranteed.*

Bren School Financial Unit

- The Bren School's Business Officer is the primary contact for budget matters related to Capstone Projects. The Business Officer is Kim Fugate (finance@bren.ucsb.edu; kim@bren.ucsb.edu); Bren Hall 2516; 805-893-3540.
- The Bren School's Financial Manager assists with budget matters related to Capstone Projects. The Financial Manager is Bridget Mastopietro (finance@bren.ucsb.edu; bridget@bren.ucsb.edu); Bren Hall 2514; 805-893-7457.
- The Bren School's Personnel/Payroll & Travel Coordinator processes paperwork related to travel associated with Capstone Projects. The Personnel/Payroll & Travel Coordinator Onella Gayraud may be reached at travel@bren.ucsb.edu; Bren Hall 2522; 805-893- 6114.
- The Bren School's Purchasing Coordinator processes purchase orders and reimbursements for items associated with Capstone Projects. The Purchasing Coordinator is Jewels Bolden (purchasing@bren.ucsb.edu; jewels@bren.ucsb.edu); Bren Hall 3524; 805-893-4172.
- The Bren School's Resource Coordinator processes parking permit requests and paperwork related to domestic travel.

B. Expense Tracking

The Project Manager will be responsible for tracking, managing, communicating about, and updating the group's budget. If expenses (phone, copies, travel, etc.) exceed the budgeted amount or do not conform to University policy, reimbursement requests will be returned and the group members will be responsible for funding the activity. Students are responsible for paying expenses above the project budget or not in compliance with UCSB and Bren School policies.

C. Printing

If groups require printing at Bren, then groups must request a transfer of some of their project funds to printing accounts. If there are not adequate funds remaining and groups require more printing, they will have to pay for it themselves and the charge will be billed to students' BARC accounts.

D. Copying

Bren copiers are for staff and faculty use only. Copying may be done at Davidson Library or the University Center.

E. Visitor parking permits

Parking permits may be purchased for clients, external advisors, etc. for parking on the UCSB campus to attend Capstone Project meetings. To obtain a permit, contact Jamie Montgomery (montgomery@bren.ucsb.edu) **at least 48 hours before** your visitor's arrival, and provide the: 1) name of the Capstone Project; 2) Capstone Project Code; 3) name of the visitor and his/her affiliation; 4) date and time of arrival; and 5) location of the meeting (building and room number). Each permit costs \$10/day and is charged to the Capstone Project budget. Reserved parking (where a parking spot is designated for the visitor near Bren Hall) is more expensive (\$30/day) and should be used only when the visitor is an extremely important individual with a time constraint.

I. Purchasing

All purchasing must be processed through the Bren School Purchasing Coordinator. The preferred purchasing method is to email purchasing requests, the project team name, and project code to purchasing@bren.ucsb.edu so the Purchasing Coordinator can place the order. Another method of purchasing is to use personal funds to purchase the item and then submit a reimbursement request. Original receipt(s) are required for all expense claims.

Students should understand purchasing policies and procedures (<https://bren.ucsb.edu/purchasing>) and ensure that their group abides by these rules. ***Please note: Any non-consumable items purchased by the group with project funds are the property of the Bren School and must be returned to the school at the close of the project (e.g. an external hard drive). Purchase of clothing for presentations, or other project related activity is not allowed.***

J. Reimbursement

If a vendor does not accept a purchase order, group members may use personal funds and then submit a receipt to the Purchasing Coordinator to be reimbursed. When submitting receipts for reimbursement, please complete a [Miscellaneous Reimbursement Form](#) and include the following:

- Original receipt with name of vendor, date, and description of what was purchased
- Name of person to be reimbursed
- Original signature

Groups have access to their Capstone Project funding until the last day of Spring Quarter. In some instances, access can be temporarily extended with advance approval from the Business Officer.

K. Travel

All travel must be processed through the Bren School Financial Office. Students should familiarize themselves with the Bren School Travel Regulations. Questions regarding travel should be sent to travel@bren.ucsb.edu. All travel reimbursement claims must be submitted to the Bren School Travel Coordinator no later than 30 days upon completion of travel to allow time for internal processing, and transfer to the UCSB Central Accounting Office in time for the 45-day UCSB processing deadline.

L. Outside Funding

Most Capstone Projects do not require outside funding and are able to fully complete the scope of work within the budget provided by the Bren School. In some cases, a project's scope of work, required travel, or materials exceed the Bren School budget and additional costs must be funded by the client. When this is the case, costs must be estimated and the client must acknowledge that they are able and willing to pay up to the amount that has been estimated. This must be established in the initial Capstone Project proposal. If a client does not pre-approve the budget, it is unlikely a project with additional costs will be selected.

Gifts

In limited circumstances a client or other external funding source may wish to make a contribution to support a Capstone Project. In this case, please contact the Bren School's

Assistant Dean for Development, Lotus Vermeer, vermeer@bren.ucsb.edu. It is imperative that individuals and organizations are NOT solicited for gifts. **Active fundraising by students without guidance from the Assistant Dean for Development is NOT appropriate.** Any discussion about potential gifts to the Bren School should be directed to the Assistant Dean for Development. A gift cannot have deliverables of any kind. If there are deliverables, or if there is paperwork to be signed, it is highly unlikely that it is a gift. No Bren student or faculty member has the authority to sign paperwork related to acceptance of money.

If a gift is received to support a particular Capstone Project, then a special Project Code will be created for the group to access these funds. If there are funds remaining at the end of the project, they will return to the Bren School general fund. Keep in mind that federal agencies, other governmental agencies and many nongovernmental organizations cannot give money in the form of a gift. In this case, any funds contributed toward Capstone Projects should either be managed by the agency or organization (strongly recommended) or directed to UCSB as a contract or grant.

Grants/Contracts

A contract or grant is used when money is given to the University for a specific deliverable(s). Given the complexities of submitting proposals for contract and grant funding, the length of time it tends to take to process proposals and ultimately receive funds, and the high overhead rate, it is far better if the Bren School receives funding to support Capstone Projects in the form of a gift or, better yet, if the client manages the funds directly. Please note that grants and contracts are required to provide for indirect (overhead) costs, which are 55% of the award, to be paid to the university; gifts are assessed 6% overhead. If a Capstone Project client or external advisor would like to provide a grant or contract to the school, please direct them to the Business Officer. No Bren student or faculty member has the authority to sign agreements related to acceptance of money.

7. COMPUTER RESOURCES

The following describes computer resources available to each Capstone Project and recommended management practices. Most of these suggestions do not require any special privileges; those that require the involvement of the Bren School Compute Team are clearly noted.

A. Project Alias

Each group chooses a short alias (less than 20 characters) for their project. The alias is used to label the project's online artifacts (directories, mailing lists, etc.) and identify the project in shorthand. The alias should be professional and should reflect some aspect of the group's research topic.

B. Group Email List

Each group will be added to an email list for their project; the group email address is "cp-[alias]@bren.ucsb.edu". This will be used as a contact email for the entire group and is accessible to Bren staff and outside parties. Groups can also make an internal list for only group members and/or their

advisor as necessary. Directions for setting up a Google Group are located here:

<https://bren.zendesk.com/hc/en-us/articles/115002102646-How-do-I-get-an-email-list-for-my-group-project>

C. Shared Directory

The Bren School Compute Team will create a shared folder for each Capstone Project on the MEDS computing server “Taylor”. The shared directory will be named “[alias]”, and will be located inside the \capstone root folder on Taylor. This shared directory will be accessible via Rstudio Workbench, SSH, and SFTP methods. The full folder path for each Capstone Project shared folder will be \capstone\[alias]

D. Group Access Permissions

The Bren School Compute Team will create a security group for each Capstone Project, named “[alias]”. The members of these groups will be the student members of each group and their faculty advisor(s). By default all group members will have group-writable permissions to the \capstone\[alias] folder and all subfolders. If you need to restrict access to subfolders to certain members of the group please contact the Bren Compute Team.

E. Google Shared Drive and Box Office 365 Document Collaboration

If your group needs to collaboratively author electronic documents as a delivery or in support of your capstone project, there are a number of recommended solutions that support this:

- Google Shared Drive / Google Docs
- UCSB Box Account with Office 365 Integration

Both of these options allow files to be shared among multiple collaborators, and for those collaborating to edit the document at the same time. UCSB Box has the benefit of Office 365 integration, allowing a more fully featured set of authoring tools.

F. Calendar

Each group may maintain a project calendar for project events and deadlines, Google Calendar, etc. Each student has an individual Google Calendar account, which can be used to propose Capstone Project meetings, etc. Please remember that when using individual accounts, only the person proposing the meeting may make changes to the meeting. Therefore, one person should be selected to schedule meetings. For more Google Calendar information, visit:

<https://bren.zendesk.com/hc/en-us/sections/201311245-Google-Calendar>

G. References

Each group may maintain a shared file of bibliographic references that will be incorporated into project deliverables, papers, etc. The Bren School currently supports EndNote bibliographic software, which can be installed upon request. Some groups choose to use an online citation manager; basic accounts are often free.

Appendix I

Evaluations

Peer & Self Evaluation:

Peer & Self Evaluations (completed quarterly) are available online:

<https://bren.ucsb.edu/academic-resources-current-students>

Faculty Evaluation:

The faculty evaluation will be submitted via Google Forms or Qualtrics. The Capstone Project Coordinator will send a link to the survey in the second half of Spring Quarter. Survey results will be kept anonymous, compiled in summary format, sent to advisors and recorded in personnel files.
